ABOUT ME

I am a student developer focused on building modern, responsive, and interactive web applications. I specialize in HTML, CSS, and JavaScript, and have strong experience in Python for logic building and project development. I enjoy creating clean UI designs and continuously improving my skills through real-world projects. My goal is to grow into a full-stack developer and work on impactful software solutions.

PROJECTS

Calculator Web App

I built a responsive calculator web application using HTML, CSS, and JavaScript. It supports basic arithmetic operations and features a clean, modern UI with interactive button feedback. The project helped me understand DOM manipulation, event handling, and layout structuring in real web applications.

Python Number Guessing Game

I developed a number guessing game using Python where the system generates a random number and the user has to guess it with hints. This project improved my understanding of loops, conditional statements, and user input handling while strengthening my logical thinking and problem-solving skills.

Perfect Circle Game

I created a browser-based Perfect Circle game using HTML, CSS, and JavaScript where users try to draw accurate circles and receive precision-based scoring. This project enhanced my skills in canvas manipulation, mouse events, and interactive UI design with real-time feedback.

GOALS

- Become a full-stack developer
- Build real-world applications
- Improve backend + database skills

HIGHLIGHTS

- 10+ personal projects built
- Strong interest in UI design
- Active learner in web technologies

STRENGTHS

- Fast learner with consistent practice in web development.
- Strong understanding of HTML, CSS, JavaScript, and Python.
- Good problem-solving skills
